

CAFAM - TECH NOTE NO 11

Re-issued 02 Nov 2002

FORMS AND REPORTS ARE NOW SEPARATE UPDATE PROCESSES

1. Introduction

We have found that the RH Margin was being cut-off on some printers. Also the process of keeping Forms and Reports up to date was proving a problem in that customised Forms were being over-written in the process. To cover both issues we have re-jigged all Reports and Forms to fit on just about any type of Printer. We have also created two different Zip files – one containing just the Reports and one for just the Forms. This way you can update your System as you see applicable. We do would recommend you keep your Reports up to date. Finally, all Reports and Forms have been labeled on the bottom of the page so that the relevant file can be addressed and modified

2. Explanation of Update Zip Files

The Zip files have been named so that you can clearly recognise which ones you need to down load. They are all called either “RPT_nnn” or “FRM_nnn”, RPT being Reports and FRM Forms.

The next group of letters “..._nnn” stand for either “A4” size or “LT” for American Letter Size with a suffix letter where “A”=Amp, “P”=PSP and “S”=SLS. Thus, e.g.

RPT_LTA.ZIP would be the Zip file containing Reports in Letter size for AMP
RPT_A4A.ZIP would be the Zip file containing Reports in A4 size for AMP

You only need download the file that applies to you, typically, a PSP User in the UK/Europe would download:

RPT_A4P.ZIP for the Reports
FRM_A4P.ZIP for the Forms (if you haven't customized your already)

and the User of AMP in the UK/Europe would download:

RPT_A4A.ZIP for the Reports
FRM_A4A.ZIP for the Forms

In addition, if you were using the Accounts Ledger System, you would need

RPT_A4S.ZIP for the Reports
FRM_A4S.ZIP for the Forms (if you haven't customised your already)

If you have customised and Forms or Reports, then make a Back-up of these to copy back over ours after any updates

Thank you for using CAFAM – “Software by Aircraft people for Aircraft People “
