

CAFAM - TECH NOTES NO 15

10 MAY 2003

INSERTING YOUR LOGO

1. Introduction

With the Windows version of CAFAM, you can customise the “look and layout” of the Program to incorporate your own Company Logo

2. How to....

1. You will need a copy of your Logo as a BMP (Bit-Mapped file).
2. Save this file in the CAFAM folder as a file called ZENLOGO.BMP. Overwrite the old file.
3. When CAFAM is launched your file will be displayed on the Desk Top
4. You can optionally turn-on or off this display during program operation by setting the switch in UTILITIES > SETTINGS & PARAMETERS – “Always display startup Logo “.
5. You can also insert the logo into your Forms. To do this go to UTILITIES > AMEND FORMS & LABELS. Select the form in question and use the INSERT tool on the LH Tools bar to insert the logo file on the form. The best place for this is the top RH corner of the form
