

LABEL PRINTER AND BAR CODE SCANNER

PRINTER

The label format supplied with CAFAM have been designed around the Zebra GK420T Printer. It is this printer that we used for the layout and stationery (See below). You can, of course, choose to use any other label printer but we will need to modify the Label Format to suit the Printer you are using. Also we have used an industry standard format of 4.25" x 3.00" for the label size

Be advised printers that do "Thermal" print i.e they have no ink ribbon but use labels that are similar to fax paper and have a tendency to fade over time. The printer model described above does Thermal Transfer i.e. transfers the ink by heating the wax ribbon

Zebra GK420t – Compact Thermal Transfer Desktop Label Printer

SCANNER

The scanner we have recommended in the past was a Scanner by Motorola - Symbol Technology, NY P/no LS2208-SR2007R-UR. This has now been superseded in being taken over by Zebra as P/no LS2208. See below

Zebra LS2208 Handheld 1D Laser Barcode Scanner
