

**CAFAM - TECH NOTES NO 32**  
**01 January 2021**

**SUMMARY/DETAIL TOO LARGE TO FIT PAGE**

**SYMPTOMS**

You can't preview any Report or Form – gives the above error

**CAUSE**

The reason for the error is most likely due to the settings of the printer on your PC . There will be something in your Printer configuration where the paper size is in conflict with the report layout. We have known printer configurations auto-change in Windows 10 to a last used setting e.g. if you printed a label, then the Windows "(un)helpfully" changes the configuration to this paper template which will give you this error of "data band being too large".

**FIX**

1. Check that your "Default" printer is set to print to A4 page size. That is what is being expected for the data being printed to fit.
2. In Windows 10 PC's Untick to turn OFF "Let Windows manage my Printer" from Settings otherwise your printer will assume the last used position
