

CAFAM TASK PROGRAM Cost £2,495+vat

An add-on program that supplements the CAFAM program to handle tasks. The Program is installed on Workstations on the Hangar floor and has no other options other than to prompt for a Job Number and address all the tasks on the Job with buttons to Add and Edit text on the task plus additional buttons as detailed below

The image consists of two screenshots of the CAFAM Aircraft Maintenance Program interface, illustrating the workflow for adding tasks and requisitions.

Top Screenshot: The main window displays the 'CAFAM' logo and a menu bar (File, Edit, Run, Help). Below the menu, it shows 'Zenner (Evaluation)' and 'CAFAM System-Main Menu'. A task list is displayed with columns for Job No, Item, Date, and Est. Man-hrs. The task list includes:

Job No	Item	Date	Est. Man-hrs
051300/00	Item 30003	19/02/2009	0.00

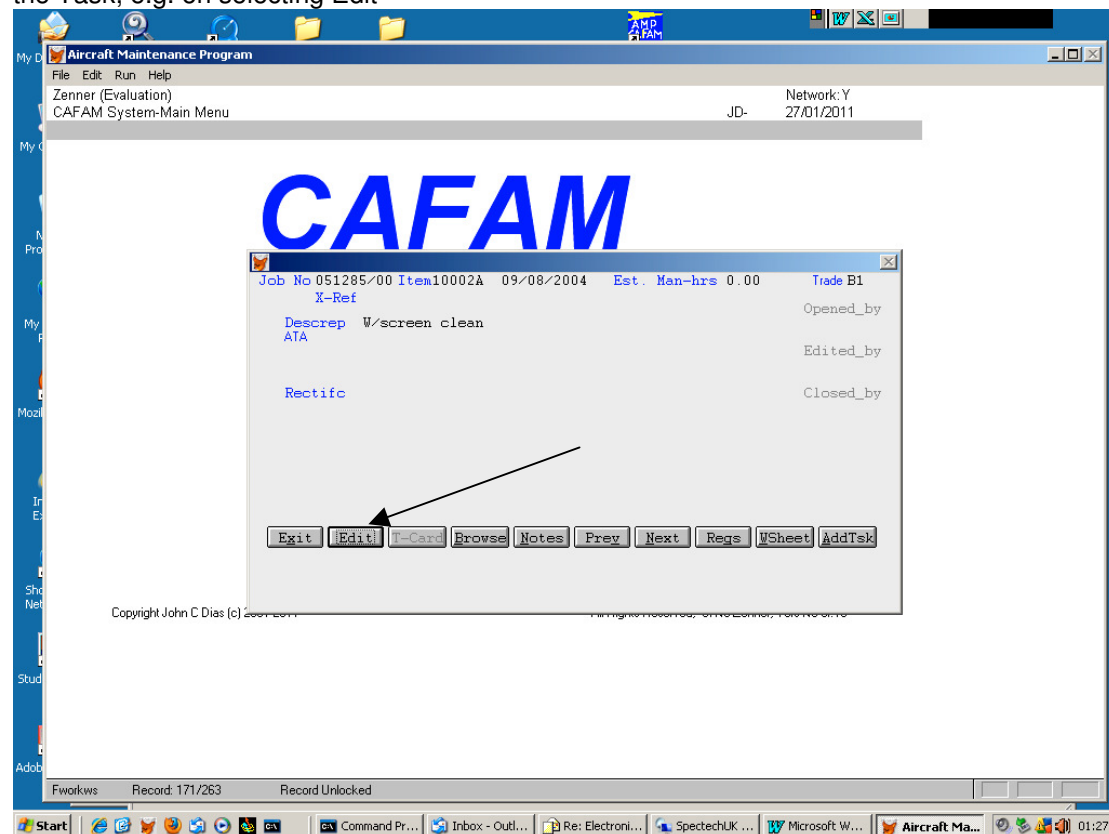

Below the task list, there are buttons: Exit, Edit, T-Card, Browse, Notes, Prev, Next, Reqs, WSheet, and AddTask. A callout box points to the 'Reqs' button, stating: 'Reqs opens new screen to enter requisitions of parts needed on the task'.

Bottom Screenshot: The 'PARTS REQUISITIONS' screen is shown, which is a sub-window of the main program. It contains a form with the following fields:

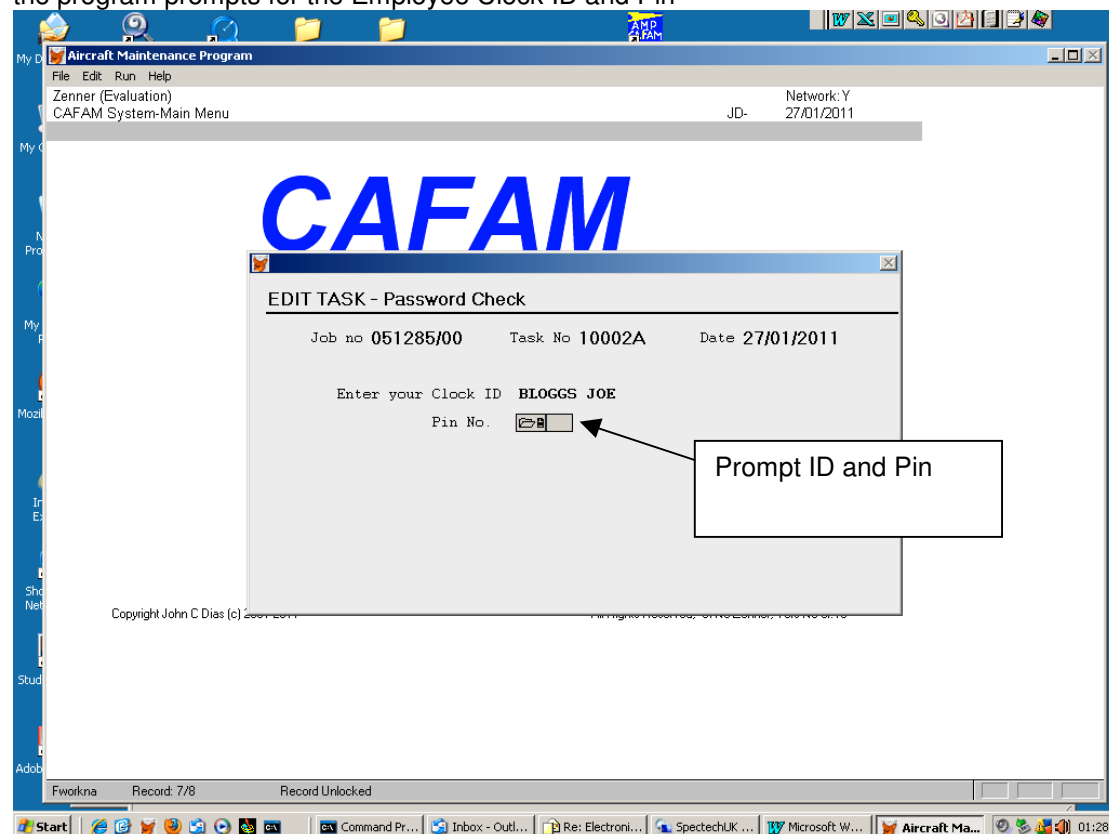

Part No	Descr	Qty Reqd	Condition	Delivery	Task	IPC Ref	Requested by	Out Station

At the bottom of the form, there are buttons: OK, Edit, Print, Orders, and Exit. A callout box points to the 'Reqs' button in the top screenshot, stating: 'Reqs opens new screen to enter requisitions of parts needed on the task'.

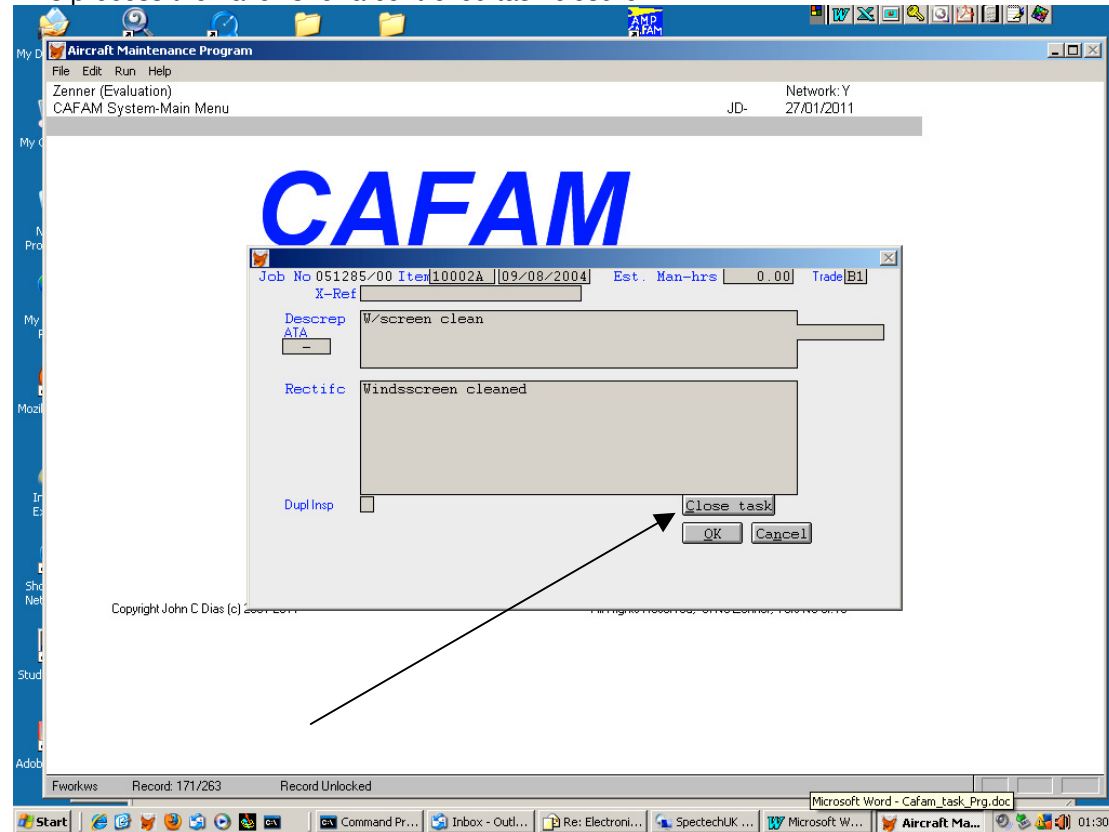

Additional processes to capture Employee and Pin of person making any Edit or Closure to the Task, e.g. on selecting Edit

the program prompts for the Employee Clock ID and Pin

This process then allows for a controlled task closure

Which lists itself in the browse table
